PROFESSIONAL SUMMARY

Full-Stack TypeScript Engineer with 2+ years of experience building performant, real-time web applications using **Next.js (App Router), React, TypeScript, and serverless architectures**. Proven track record in integrating **Claude LLM APIs** to create dynamic AI-driven features and optimizing modern frontends with **Tailwind CSS and Framer Motion**. Background in Pure Mathematics brings strong algorithmic thinking and complex problem-solving skills. Available to work full-time during U.S. business hours (EST).

CORE SKILLS

Frontend:	Next.js (16/App Router), React (19), TypeScript, Tailwind CSS, Framer Motion, HTML5, CSS3/Sass
Backend & Cloud:	Node.js, Express, Convex (Real-Time DB), Serverless Functions, REST APIs, GraphQL
AI Integration:	Claude LLM API, AI Workflow Automation, Dynamic Content Generation, Prompt Engineering
Testing & DevOps:	Git, GitHub Actions (CI/CD), Jest, React Testing Library, Performance Optimization (SSR/ISR)

PROFESSIONAL EXPERIENCE

Full-Stack TypeScript / AI Engineer — Adonai Global Solutions Ltd September 2025 – Present

- Engineered responsive, end-to-end web applications using **Next.js App Router, TypeScript, and serverless backends**, ensuring cross-browser reliability and smooth execution.
- Integrated **Claude LLM APIs** to automate backend workflows, power dynamic application interfaces, and enhance user personalization.
- Architected real-time data flows and serverless API endpoints using modern backend services (Convex/Node.js), cutting client-side data fetching errors significantly.
- Implemented rich micro-interactions and dynamic page transitions using **Framer Motion** and **Tailwind CSS**.
- Collaborated across international project specs to translate complex business requirements into high-quality technical implementations.

Front-End & Full-Stack Developer — Spraditech Digital Solutions February 2025 – October 2025

- Architected and shipped 10+ production web applications using **Next.js, React, and TypeScript**.
- Boosted application load speeds by 35% through Next.js SSR/ISR, asset optimization, and lazy loading (Lighthouse score 95+).
- Led the conversion of legacy JavaScript code bases to **TypeScript**, resolving 200+ type errors and strictly enforcing code maintainability.
- Built dynamic user components with modern CSS tooling and automated deployment flows via **GitHub Actions**, cutting deployment cycles by 50%.
- Maintained 80%+ test coverage using Jest and React Testing Library, reducing post-release production bugs by 30%.

PROJECTS & AI WORKFLOWS

- AI-Powered Web Applications:** Developed full-stack dynamic platforms showcasing real-time data handling, modern UI frameworks (Tailwind/Framer Motion), and custom Claude API integrations for automated content generation. (Live at portfolio-v2-lovat-one.vercel.app)

EDUCATION

B.Sc. Pure Mathematics — University of Lagos (UNILAG)

2017 – 2023

Relevant Focus: Linear Algebra, Applied Logic, Differential Equations, Real & Complex Analysis. Strong emphasis on computational logic and algorithm optimization applied to engineering.
